

Bee on Budget Usability Tests

1. Create your fictional user for the application and log in.
2. Try to create a new budget and add your expenses to the categories.
3. When you have finished your wanted budget, you can add your future saving goal.
4. Now you can go back to the home menu and use the show saving plan function to generate a saving plan towards your saving goal from the input expenses in the budget.

User experience evaluation:

How much did you like the application, rate from 1-10?

- Comment: 8, (would like to show recurring expenses into calendar).

Were there any functions in the application that were unclear, or hard to understand? (If yes, please state these functions)

- Comment: Nope.

What did you think about the design of the application (Layout of pictures and buttons)?

- Comment: Easily understandable and a comfortable layout.

Do you feel there are any functions missing in the application?

- Comment: As above; calendar functions. Ex: recurring payment.

Please come with additional feedback, both positive and negative ☐

- For the months checkbox, pulldown bar to add a certain amount of months instead of permanent? (ease of life function, no need).
- There is no way to select which budget to show in the diagram (parameter selection), is this a planned future?
 - If not, good addition if there's many budgets.

Final feedback from product owner:

1: budgett chart colours changing randomly after edit (kjekt om income / expense har beholdt samme farge for totalen). 2: Tror Savings plan er broke, la inn 3 setups

(1 daily, en weekly & en non-recurring). får bare "total saved" og det tar ikke med weekly siden jeg satte start dato i morgen.

Annet en det ser den flott ut
